

AUTHENTIC PERFORMANCE™

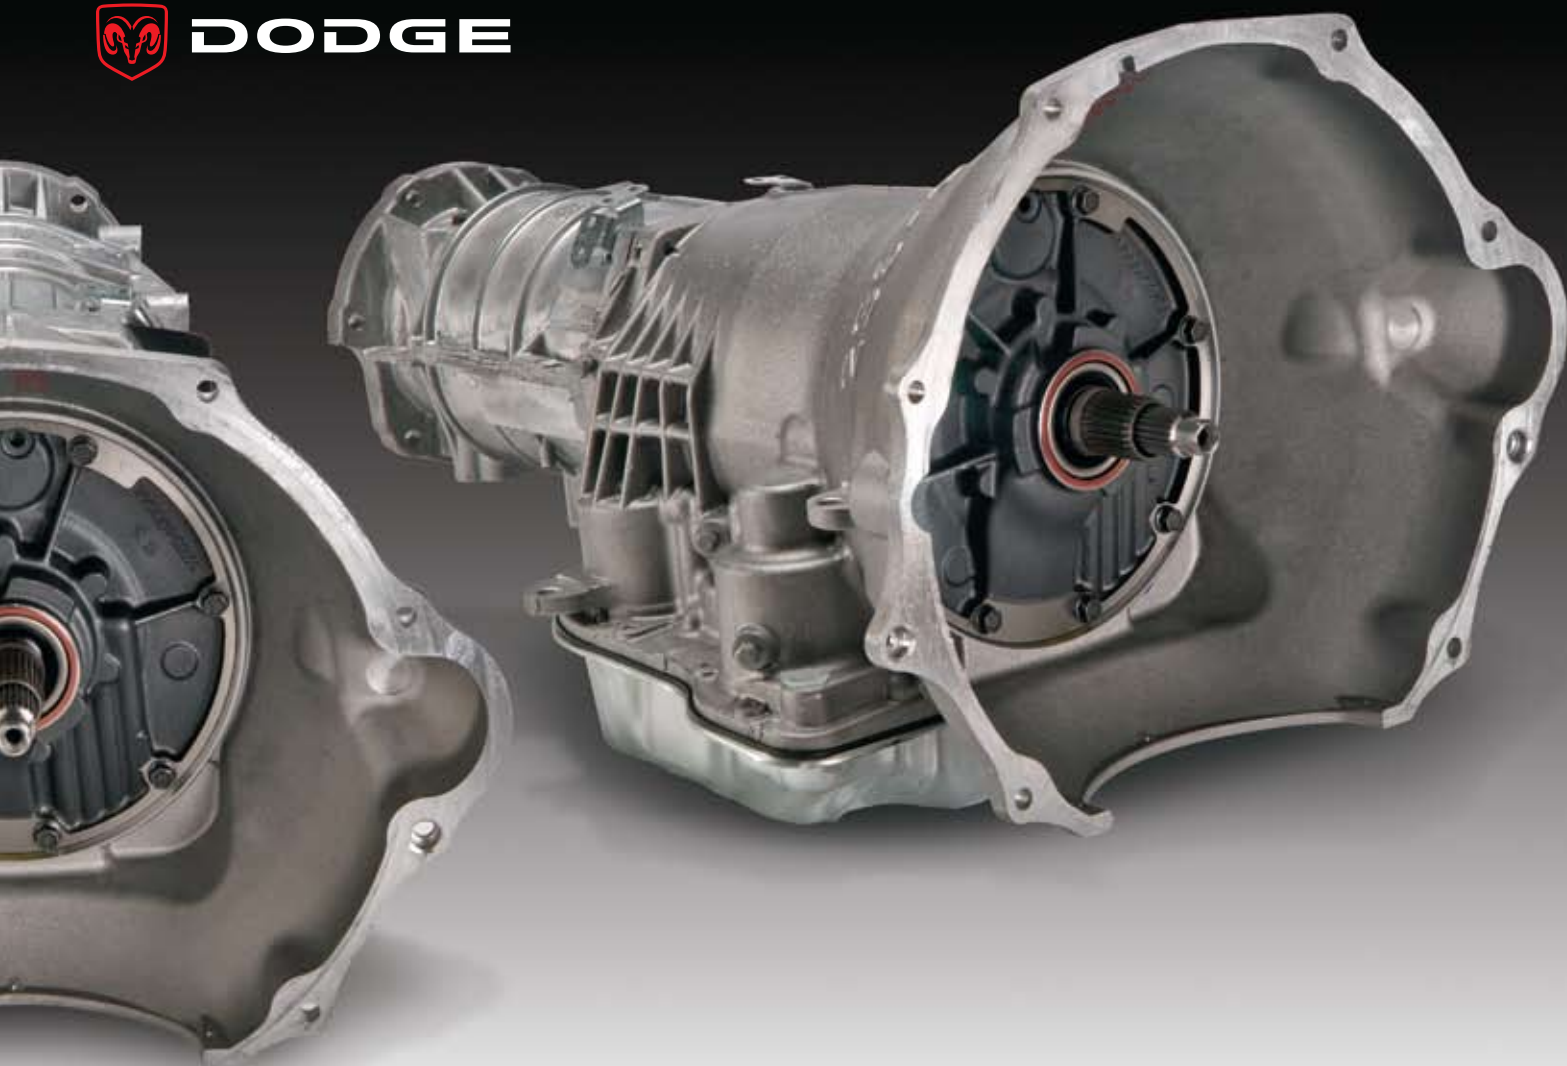

SERIOUS PERFORMANCE FOR SERIOUS WORK

Heavy-Duty Remanufactured Transmission
Available for the Dodge Ram

DODGE

A WORKHORSE TRUCK NEEDS A WORKHORSE TRANSMISSION.

Commercial fleets, construction trades and other owners of Dodge Ram pickups have one thing in common: They've come to rely on their trucks for serious work. Cargo hauling, trailer towing; you name it and the Dodge Ram can deliver the goods. But all that work can eventually take its toll on the transmission.

If the time comes for transmission replacement on a high-mileage Dodge Ram pickup, Mopar has a new solution for fleet managers and Ram truck owners: A Heavy-Duty/Extended Life remanufactured transmission designed specifically for the rigors of towing and cargo-hauling.

Mopar's new Heavy-Duty 48RE remanufactured transmissions will be available in June for 2003–2006 diesel Dodge Ram applications. This new heavy-duty transmission promises performance superior to standard transmissions.

Using beefed up components, Mopar's Heavy-Duty 48RE Transmission offers crisper shifts and exceptional durability for Ram owners who work their trucks to the bone. Simply put, the 48RE is a serious unit for serious work.

Some features of Mopar's 48RE Heavy-Duty transmission that make it stronger and more durable than conventional transmissions include:

- Improved timing and flow reduces converter overheating, and decreases the occurrence of TCC shudder.
- A heavy-duty throttle valve kit restores throttle valve control, so the transmission will not hang in gears as long, or be as sensitive to downshifting under load.
- Front servo piston cover designed with an o-ring to ensure hydraulic seal of direct clutch oil.
- Intermediate shaft plug kit improves lube flow and reduces internal temperatures.
- Upgraded stator support bushing material improves durability.
- High-energy front and rear clutch for increased clutch capacity and firmer shifts.
- Each unit includes a heavy-duty torque converter to maximize durability.

Mopar's 48RE Heavy-Duty transmission also includes several features not found on conventional transmissions, including:

- Turbine stiffener plate to eliminate hub cracking.
- Kevlar reverse band allowing for higher torque capacity.
- Billet front cover to eliminate converter ballooning.

Give your Dodge Ram customers the quality and performance they demand from their hard-working pickups. Give them Mopar's Heavy-Duty 48RE remanufactured transmission and do the job right.

MOPAR HEAVY-DUTY 48RE TRANSMISSION APPLICATIONS

Model Year	Application	Trans.	Engine	Reman Part No.
